

MALWANDLA HLONGWANE

Junior Software Developer (Full-Stack / Web)

Gauteng, South Africa | 065 883 1240 | MalwandlaHlongwaneICT@outlook.com | linkedin.com/in/malwandla-hlongwane | github.com/Malwandla21-ict

PROFESSIONAL SUMMARY

Final-year ICT (Applications Development) student at the University of Mpumalanga with hands-on experience designing and building full-stack web applications end to end, from database schema and REST APIs through to authentication and frontend integration. Comfortable working across the stack in JavaScript, PHP, and Java, with a strong grounding in software engineering practice (requirements analysis, UML modelling, Agile/Scrum, and testing). Seeking a junior software developer or internship role to apply and grow full-stack development skills in a professional environment.

TECHNICAL SKILLS

- **Languages:** JavaScript, PHP, Java, HTML & CSS, SQL
- **Backend & APIs:** Node.js (Express), REST API design, JWT authentication, MVC / layered architecture
- **Frameworks & Tools:** Jakarta EE (Servlets, JSF, RESTful services), XAMPP, Git/GitHub
- **Databases:** MySQL (schema design, normalization, advanced SQL, CRUD operations)
- **Software Engineering:** Requirements engineering, UML/system modelling, Agile & Scrum practices, test-driven development, object-oriented design & design patterns

FEATURED PROJECT

Taskify: Campus Task & Equipment Marketplace

Tech: Node.js, Express, MySQL, HTML, CSS, JavaScript

Full-stack web application enabling students to post tasks, hire services, and rent equipment within a secure campus-based marketplace.

- Implemented JWT-based authentication to secure user accounts and API access
- Designed a full task lifecycle system (Posted → Accepted → In Progress → Completed)
- Built an equipment rental system with booking and return-tracking functionality
- Developed a rating and review system to establish trust between users
- Created a payment simulation system to mimic escrow-style transactions
- Designed RESTful APIs and integrated frontend with backend services
- Implemented reporting and moderation features to improve platform safety

GitHub: github.com/Malwandla21-ict/taskify

ADDITIONAL PROJECT

FUEL SA: Fuel Station Management System

Tech: Java, JavaFX, FXML, Scene Builder, CSS

Desktop fuel station management application simulating station operations through an interactive GUI.

- Built using object-oriented programming principles with modular separation of logic, controllers, and UI
- Implemented fuel request functionality with input validation and event-driven interactions
- Designed responsive interfaces using FXML and Scene Builder, styled with JavaFX CSS

GitHub: github.com/Malwandla21-ict/FuelSA

RELEVANT COURSEWORK

- **Web Development:** dynamic web content, PHP (OOP, arrays, forms), MySQL (joins, PDO), JavaScript (DOM, objects), sessions & authentication
- **Application Development (Jakarta EE):** Servlets, JSF, RESTful web services, JSON binding, persistence/ORM, microservices
- **Software Engineering:** SDLC, requirements engineering, UML system modelling, architectural design, Agile/Scrum, software testing

EDUCATION

Diploma in Information and Communication Technology (Applications Development)

University of Mpumalanga, Expected Completion: 2026 | Average: 75-78%
