MALWANDLA HLONGWANE

Junior Android Developer | Mobile App Developer

Pretoria, Gauteng, South Africa | 065 883 1240 | MalwandlaHlongwaneICT@outlook.com
Portfolio: malwandla21-ict.github.io/MH-Profile | **GitHub:** github.com/Malwandla21-ict
LinkedIn: linkedin.com/in/malwandla-hlongwane-8484603a3

PROFESSIONAL SUMMARY

Final-year Diploma in ICT (Applications Development) student at the University of Mpumalanga who builds native Android apps in Java. Built HealthWise, an AI symptom checker using Room, Retrofit, AlarmManager and Material 3, and currently building STAMS, a Flutter app backed by a Spring Boot REST API. Strong Java and backend foundation from Jakarta EE, JavaFX and Node.js projects, covering both the app and the API behind it. Seeking a Junior Android Developer, Mobile Developer or internship role.

TECHNICAL SKILLS

- **Languages:** Java, Dart, SQL, XML; Kotlin (coursework level)
- **Android:** Android Studio, Android SDK, Activities and lifecycle, XML layouts, Material Components 3, RecyclerView, intents, notifications, AlarmManager, BroadcastReceiver
- **Data & Networking:** Room (SQLite) with migrations, SharedPreferences, Retrofit, Gson, REST APIs, JSON, AI API integration (Hugging Face)
- **Cross-platform & Backend:** Flutter, Spring Boot, Spring Security (JWT), Node.js, Express.js, PostgreSQL, MySQL
- **Architecture & Tools:** Repository pattern, MVC/MVVM, object-oriented design, Git, GitHub, Postman, debugging and testing
- **Also covered in coursework:** Firebase, Google Maps API and location services, multimedia, signed APK/AAB and Play Store deployment
- **Professional:** Problem solving, user-focused design, teamwork, technical documentation, fast learner

PROJECT EXPERIENCE

HealthWise | AI Symptom Checker Android App

Native Android application

Tech: Java, Android SDK, XML, Material Components 3, Room (SQLite), Retrofit, Gson, AlarmManager, Hugging Face API

- Built a native Android app with a four-step guided symptom check that ranks likely conditions with confidence scores and gives urgency advice.
- Integrated an AI chat assistant through the Hugging Face Inference API using Retrofit, keeping conversation context and suggesting follow-up questions.
- Stored check history, health profile and medication data in Room, with schema migrations that keep user data across upgrades.
- Built pill reminders with AlarmManager, BroadcastReceiver and notifications that work when the app is closed, with a mark-as-taken action.
- Used a repository pattern to separate Activities (UI) from data access and scoring logic.
- Designed light and dark themes with Material 3, voice input for symptoms and adaptive icons; supports Android 7.0 (API 24) and up.

STAMS | Student Accommodation Management System

Mobile app + REST API | In progress

Tech: Java 21, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, PostgreSQL, Flutter, Dart, Postman

- Building a Flutter mobile app and Spring Boot REST API for landlords to manage properties, rooms and student residents.
- Designing a maintenance workflow where students report issues with photos, track them from Reported to Resolved, and nudge landlords when an issue stalls.
- Implementing JWT authentication with Spring Security and testing API endpoints in Postman.
- Next phases: Swagger/OpenAPI docs, unit tests, Docker and GitHub Actions CI/CD.

ADDITIONAL PROJECTS

Taskify | Campus Task & Equipment Marketplace

Full-stack web application | Deployed live

Tech: Node.js, Express, MySQL, JavaScript, HTML, CSS, REST API, JWT, Render

- Built and deployed a full-stack marketplace where students post tasks, hire services, buy items and rent equipment.
- Secured the platform with JWT authentication, TOTP two-factor sign-in for admins, bcrypt password hashing, Helmet security headers, rate limiting and server-side input validation.
- Wrote 134 automated tests across 13 test suites (Node.js test runner) covering rentals, sales, disputes and tasks, all passing.

GitHub: github.com/Malwandla21-ict/taskify | **Live site:** taskify-marketplace.co.za

FUEL SA | Fuel Ordering & Station Management System

Java desktop application

Tech: Java 17, JavaFX 21, FXML, CSS, SQLite (JDBC), Maven, BulkSMS REST API

- Built a desktop app where customers register vehicles and request fuel with a live cost estimate, and admins approve or reject requests from a dashboard.
- Stored passwords as salted PBKDF2 hashes and kept API credentials out of source code using environment variables.
- Organised code into controllers, DAOs, models and services, with a demo mode that loads sample data.

EDUCATION

Diploma in Information and Communication Technology (Applications Development)

University of Mpumalanga | Expected completion: 2026 | Academic average: 75–78%

Relevant coursework:

- **Android Application Development:** app architecture and lifecycle, XML/Material Design UI, navigation and intents, SharedPreferences, SQLite/Room, location services, REST/Firebase integration, testing, debugging, Play Store deployment
- **Application Development II (Java):** OOP, GUI development, collections, recursion, searching and sorting algorithms, file I/O, JDBC
- **Software Engineering:** SDLC, requirements engineering, UML, design patterns, Agile/Scrum, software testing
